RasterPrint™ Loop - Art should be minimum of 100 dpi at final size. **ONE inch of bleed is required.** Images too close to the edge may be lost. If sending files with placed images, all support files should be included. If support files are not sent we will not be able to color correct or check resolution. In this case the file will be printed as is and we hold no responsibility for color or quality of print. **NOTE: If your image spans over multiple panels be aware that 2.125" will be cropped out where poles intersect artwork.**
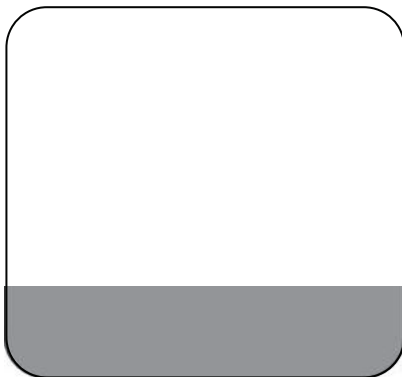

Xpress®   Scan - Art should be sent as EPS vector files, files do not need to be sent to size.
